Except it's not, it's an official renegade patch map... where do you think the rest of the flying maps came from? From Westwood. City_Flying and Walls_Flying were released in the first patch I think, but Glacier_Flying came a little later.

Correct. The original maps are...

walls
volcano
under
mesa
islands
hourglass
field
complex
city
canyon

Of all the patches released (seven to be exact) City Flying and Walls Flying came in with the very FIRST patch. Glacier Flying came out during the 5th patch. The others were just bug fixes.
