a  
a0  
a000000

a and a0 are not possible afaik due to the 3-character nick restriction (I believe) Jelly owns a000000 and uses this for the Sniper severer (Though that's not running right now AFAIK)

As for the others, I don't know, I do know Tsolutions offers some nicknames when you but a server from them, what those are though, I don't know.
