Commando no. 448 You know it might be interesting to watch the united states close their borders. Then we can watch as their economy falls apart as they are mainly secondary industries. Only countries with enough primary industries could successfully close their borders. The united states would run out of oil, certain metals (copper is a major one), possibly food, maybe even water if us Canadians decided to dam some of the rivers flowing into the united states. Sorry about dropping to this level but I just can't hold back on oppertunities to throw my tiny bit of mud at the hulking beast that is in bad need of a power cap.

As for Canada's military, we anything but mal-equipt. We have what we need. You don't need millions of men to defend a country from wars that will not start within 50 years. We have a navy made mainly to support the UN. We have a military to aid UN actions. And we have an airforce assist the UN peacekeep. We don't worry about wars coming to our door. Sorry again I am a proud Canadian.

DDB good luck on your dream. Nice to hear you are finaly able to have a shot at at. Though I also hope you won't be exposed to too much combat. Wouldn't want you being injured.[/b]

Alaska has the second largest oil field in the world. Texas can produce just as much oil as Iraq. The US is a secondary Industry???? How do you figure? If we were to close our borders the world economy would crumble. You depend on us for money to keep your countries going. Don't deny it. Where would Germany, France, Russia, China, Iraq, Iran, Saudi Arabia, U.K, Japan, Korea, Mexico..... the list goes on if it wasn't for the good ole "U.S. Green Back"? Please tell me. Europe had to form a Unoon for its currency just to compete with the dollar, but in the end the US dollar still Owns j00.

And food? We produce more food than you, UK, Germany and Russia combined. I'm from a state that produces more milk than anywhere in the world!
