Quote:lol i dont think its possible for a cpu to run at 50-60degrees Farenheight

Hehe, once, I made a custom cooling system. I took the air out of my AC vent, which was quite cold, then ran it to about 5-6 fans. I got it down quite low while running a few programs. (It was really loud, hehe)

P.S. Just for looks, I would go with #2.
