Quote: Answer me a few questions though  
What kind of FPS are you looking for  
Are you willing to OC?  
What games do you want to play, or will you play?  
Dual video cards in the future?  
Preferences towards AMD/Intel or ATI/Nvidia.  
FPS: rock solid 60 (or 75 depending on refresh rate), plz  
OC: not really interested. Though I did overclock my current video card a bit  
Games: I'm not one to play 50 different games, atm I play Renegade and COD5 and it'll prolly last like this for another year. I'd like to at least play those at highest performance  
Dual: from what I heard of it, it's not really worth it  
Preference: none, though up to now I had most experience with Intel and Nvidia
