---

is it possible to make stealth blackhand's and deadeye's, client side? I want to make my deadeye's and blackhand's look like an sbh when the sbh shoots.

This is my first post, so don't be harsh =/ I am use to skinning and such and I know a little bit about renegade modifying. I know that the stealth effect has nothing to do with skinning. I have looked all over the web for tutorials that could explain how I can modify the renegade infantry, could anyone please give me a brief explanation of what program I need and essentially what i would need to do.

Thank you, GoTTeM.
