"Daniel" A better AFK command would be this...

```
function OnChat(PlayerId, Type, Message, Target)
  local command = string.lower(string.match(Message, "%S+"))
  if command == "!afk" then
    local pName = Get_Player_Name_By_ID(PlayerId)
    Console_Input(string.format("kick %d", PlayerId))
    Console_Input(string.format("allow %s", pName))
    Console_Input(string.format("msg %s has been kicked for: AFK", pName))
  end
  return 1
end
```
