EvilWhiteDragon wrote on Thu, 24 December 2009 04:29Yes.

Toggle Spoiler1. it could crash during copy installations. Small chance, but it happens.

2. you could make a mistake and overwrite important OS files, causing the current install to be corrupted.

3. you could accidentally wipe the contents of the drive and with that deleting the OS.

4. any combination of the above

Crap, but thanks, Hope this goes well
