Yes Ubuntu can have DD as well.

In SSH;

dd if=/dev/sda of=/dev/sdb bs=4096

sda = HD you want to backup
sdb = HD you want to move everything to.

sda and sdb will most likely be different when you connect the HD's. Make sure you have another HD the exact same size as the one you are wanting to backup. Or you can copy "sda" to your current HD as a iso.

dd if=/dev/sda of=/oldhd.iso bs=2048
