Omar007 wrote on Thu, 07 January 2010 03:12 Well apparently he uses VISTA or W7 according to the white screen

I think the easiest way would be reïnstalling using the sticky

But if you like to try other things first:

1. Try 'Run As Admin'
2. Some older C&C games work better in compatibility with XP SP3 (on VISTA. W7 not really)
3. delete anything custom (scripts, shaders, models etc)
4. try to reinstall scripts.dll

Yes I use Vista, ive had a lot of problems with Renegade with Vista and XP. Ill try what you suggested.
