Hi I recently installed Renegade Resurrection on my server which is running coop beta 3.0 made by zunnie but for some reason the server randomly crashes. like i could join play a map and when loading the next map it would crash sometimes. Also when a player leaves it would crash or if the time limit runs out with someone ingame it will crash aswell. just wondering if anyone else has had these problems and knows how to fix them lol

Edit running windows 7 on the computer the server is hosted on if that helps
