Caveman wrote on Sun, 31 January 2010 08:10All GFX cards now n days can support 2048*1536 and beyond (DVI). However just cos it can display it doesnt mean it will work well. It will run out of steam at around 1280*1024.

Well, mine isn't dvi it's vga. My gfx card is also two or more years old. What do you mean 'out of steam?'
