Using a modified version of 1.52 build 1. Yea it is easy to add a new name but i was wondering if it worked. Whats different in 1.53? beta test version? I remember their being a 1.52 build 2 whats different in that version? I don't use the brloader so I don't know if there is any updates. If i update it would most likely fuck over my modification. I have all the current updates for your plugins.
