Yeah, I'm not doing any OC'ing, but here's the picture just for you Homey. I am going to pick up a full HD monitor one of these days so it's still not complete!

You can also see my shitty desk. It's a part of a bunkbed lol. That's another thing I need to add to the list.

Hey, by the way, Sapphire put out a 2nd gen 5850. That will still work with my current one right?
