sjezk3It was good while it lasted but now theres a endless ammount of cheats aimbots wallhacks bigheads and 1 shot kills i was playing last night and every single server i joined had at least 1 person using one of these hacks and this is no lie seems like the renegade community is destroying itself. I reccon if this carries on the way it is doing EA will have it shut down i hoping that someone brings out some sort of punkbuster for renegade thats if its not already to late. Everyone has cheats WTF???

That's funny... I just got finished playing on at least 3-4 different servers (all dedicated and well known) and none of them had anyone cheating in them. And if they did... those people who were really sucked because it didn't show.
