I am having this issue as well, but have more incite as to what is causing it (don't know how to fix though...)

Ok, so here is what is happening to me:

I installed Win7 x64 & Renegade, Renguard, etc. Upon launching Game.exe (RenGuard) it will launch and connect to the servers just fine, however, is in a crappy 800x600 resolution (I already read the FAQ, so don't get ahead of me). I set WWConfig and Game2.exe to run as administrator and I am able to change my resolution to my preferred wide-screen setting (1366x768). After the resolution change I am able to start Game2.exe (Original EXE) and play with the new resolution offline with no issues. However (here is the kicker), if I launch Game.exe (RenGuard) to connect to a server it instantly boots me saying the LAN-Exploit error.

One additional piece of info, when Game2.exe (Original EXE) is launched it makes me click 'YES' to allow the game to run (since it is running as administrator)... I am thinking the extra operation of having to click to allow the app is causing this issue.

I'm going mess around with more settings, but anyone have any ideas?
