Sir PhoenixxGriever92Back again with a new Screen for my AK Model,

<http://www.n00bstories.com/image.view.php?id=1158437173>

Tell me what you think of it now, i rounded off as much of the edges of the Stock and Grip without screwing them up. Put the holes in the Foregrip, added a Shine to the wood areas, etc.

Tell me what you'd think it would look like with a Scope on it, would you like one on it, or not? As with last time, open to any Comments, criticisms, etc.

Well, rounding the grip and buttstock screwed them up alot. The easiest way would have been to leave it as flat like it was, and extrude the left and right sides of the grip/buttstock once and scale them down to form the curve. Now it just looks like you stuck it in the microwave.

spreegemI don't think an AK 47 ever could, should, and would have a scope on it, It's an assault rifle, not a sniper rifle.

You know absolutely nothing about guns. You really should STFU, all you're doing is making yourself look stupid.

The gun's use has nothing to do with rather or not it can have a scope. Most assault rifles already have special rails to install scopes on, railings can easily be added to most other assault rifles, and there are some very well known SMG's that can have scopes installed on them, and there are even some handguns that can have scopes installed on them.

Oh look, an AK-47 with a scope, but wait, you said it couldn't have one...
