Hello,

I want to play renegade again after 6 years ;p

I installed the game like normally but then its really strange.

I downloaded rengaurd and installed it. First it said startprogramm 410 or something bandwith.dll. I fixed it and treid to play. I have filled in my username and password, but it didn't work. I couldn't see the serverlist. I tried really everything on this forum.

Im running windows 7 ultimate Intel Core2 CPU
6400 @ 2.13 GHz, 1GB RAM, NVIDIA GeForce 7300 LE

Please help,

An old renegade player
