Sladewill wrote on Mon, 12 July 2010 04:09unless you could convince the TT team to impliment it?

I suppose if someone was to write it in a clean, working, securely and portable manor then they may consider including it. However, they would likely still have to make several changes themselves, and also need it tested very rigorously too, all adding to their release schedule.

Plus, you've got to find someone to actually write it. There are few in this community outside of the TT team that have the ability, time and motivation to actually do it.
