This has been a problem for a while and ive been looking for a fix for a long time.. have had no results. This is on PlayStation 2

Since i used Gameshark ony my Driv3r game it will not start on its own. it will not pass the first loading screen it just sits there and stays on the loading screen as though it is loading. When i used Gameshark to start it it goes through the first loading screen without any trouble. This is annoying due to occasional freezing due to bad CD.

My ideas on the problem:

Bad CD

Karma hates me for cheating (joke)
