jonwil wrote on Sat, 24 July 2010 09:59My AVG Anti-Virus reports that renegadeserver.exe from the renegade FDS is infected with a virus. Does anyone else get reports for that file?

Windows says the file is 94,208 bytes in size, does this match with what everyone else gets?

Just trying to confirm if its a genuine report or not.

My renegadeserver.exe is 27 KB (date: 19 Jan 2005)
