Hello, Renegade has been one of my favorite games I have ever own. It was always the game I could install and have fun with all the time...It has been installed onto over 6 computers, and removed from them...

Yet now when I try to reinstall, this error shows up (click to see a larger image)

The installer freezes on a map file, around 64%, and this error shows up.
I have heard that you can give an ISO to the game if possible.

I will provide any evidence that I own the game and still have the code and everything.

thanks for the help,

Mkt778.
