Oxi coded a special protection system into APBBR for public players
to protect their names.
You must register your name on irc: /ns register pass email [enter]
You must then register with APBBR bot by PM-ing it: !register ingame nick password [enter]
Then join the server, the player-ingame-ip is checked against the one on irc and if it matches the player is not kicked.
If the protected playername is not found in irc it will be kicked.

Edit, also:
