Back to square one. =/

Should have figured it wouldn't work, darn it for being so hopeful...I'm afraid that is how things have to be then -- unless people are able to host an FDS server with SSGM installed. Even then, if you host an FDS server on yourself, and play Renegade on the same computer your hosting, you won't see it in the serverlist -- which means you can never join the server with your buddies.

What a day. Thanks for testing it and letting me know though Altzan. Appreciate that effort.
