Cant say anything about the beta but I can answer your questions:

Map hash checking is already in 4.0 and working. We check a whole range of files including map files, w3d files, objects.ddb and more.

As for a full list of changes, we have made far far far too many changes to list them all.

We will be writing documentation at some point that explains the user-visible changes (e.g. new console commands, new ini keywords etc) and modder-visible changes (new scripts, new things you can set on presets in LE etc).
