WHOA WHOA WHOA!

Before running out and buying a new video card just download the ATI control panel from their site. Once you install it go to video properties and under settings click advanced. There should now be a lot of new tabs with ati icons on them. Click the direct3d one and change the slider to performance instead of quality like its set at in the middle.

Gave me a nice little fps boost.

Also try running renegade at 640x480 or whatever resolution. It really isnt that bad and it gets lots of fps
