danpaul88 wrote on Mon, 25 October 2010 16:44I have seen that happen before when a bot is ZLined by the server... usually that would also prevent mlrc from connecting from the same IP address though...

The fact it's also dropping it's connection to the RenGuard server indicates you may have a network connectivity problem?

Its not from the same IP, its being run from a dedicated server and not my home connection. Anyway to test if its being zlined for sure?

Could it be related to the ASE network issue and should I try putting the renguard DNS in my hosts file too?
