Quote:But if it can 'see' the files', it can essentially read them. It can probably be written into brenbot as a plugin, if it hasn't been already.No, it can not read them. It can only ask the client "hey, does this file exist?" and then the client says either "yes" or "no". I'm pretty confident you can't abuse this to read files by any server side modification.

If something pulled up logs and internet history, it's probably not related at all to this mapch function (nor any other Renegade function I know of).
