Ya, looking forward to RenGaurd http://www.renguard.com/

We have managed to block users from using the objects.ddb file on our server, however the Anti-Cheat.pkg file we made does not block W3D Files.

We have shared our information with most of the RenGaurd Team and hope to assist or combine in efforts/resources to tackle these fragin punk cheaters.

We want the community to have access to Anti-Cheat.pkg now to ensure hope in the game and community, Your Admins can provide you link to downloads on their sites, once they have checked it out.
