Hello everyone I am a new member to the forum and this is my first post here. I have been a longtime fan of renegade. I have not played it for a few years. One day while in the basement cleaning I found the CD's for renegade. That when the cravings and sleepless nights came back...lol I have been trying to get this game in play for close to 6 hours. Now let me be the first to tell you that I really am not smart with computers. So I might ask a few more questions than the average user. If you could dumb things down for me that would be great.

I have installed and uninstalled this game probably 5 or 6 times today. I first started out just skimming threw the fourms and downloading whatever I was able to find. bad idea. Eventually i found the "Install in 9 steps" thread. I tried to follow this thread several times with no luck. But like I said I am not good at computers and i believe my troubleshooting just made things worse.

I decided to set up a new user account on my pc and start from scratch. I have successfully installed all the patches which i was unable to do before. I also installed the 3.4.4 update that was in the step. and i can successfully open the renegade game without getting the black screen that never wants to go away.

I went to the multiplayer, westwood, than advance game listing and I cannot find to any servers. Basically nothing comes up it says no "servers can be found". I also downloaded renguard but it does not pop up when i click on renegade like it did in one of my previous attempts. I know renguard serves a purpose for anti-cheat but Do i need rearguard to get to the servers?

Does anyone have any ideas on what my problem could be.
How do i register a user name to renegade?
Is there anything else I can do to get this game to work.
Plz help...
