I cant reset my password is there anything wrong with xwis.

Quote:

To change the password for all nicks registered on your serial:

- Start renegade
- Log on xwis with the nick you want to reset the password for, using a bad password, you now should see an empty server listing
- Go to "chat" in the left side menu, this one should be empty as well
- Now type reset password in the channel you are
- You will receive a message from xwis with a new password for the account you tried to login with (condition: it needs to be registered on your serial)
- Done

I usually do that but no msg is popping up when i type reset password tried xwis tool as well seems to geting all the nicks from my serial but cant reset.
