My nightregulator bot has kinda f***ed up lately. It was working fine last night, but when i joined my server this morning it would load to "Aquiring IRC Server list" when it presented this message.

I tried everything to get it back online but couldn't find a thing wrong with it. I Tried running a twin server to see if it had something to do with just one server but on both servers i got the same error. Can somebody please help me here.
