Subject: Random FPS Drops and Ping
Posted by zeratul on Fri, 18 Feb 2011 01:48:08 GMT

My FPS is usually around 60 to 70. Occasionally my FPS drops to 5 for about a minute then returns to normal. It tends to get annoying.
It does this no matter the amount of action ranging from very little to too much to function.
It also does this no matter the performance setting ranging from lowest to highest.
My Video card is a Nvidea Geforce with CUDA (no other information known)
Ive checked Task manager CPU usage is only 5 to 10 % higher than normal

Also my ping usually sits between 90-150 and randomly spikes to 5000+ these spikes last anywhere between 1 to 5 minutes. im using wifi if this has any effect.
