Basically cost me like £850 for the ps3 and tv.

In comparison my computer which still runs everything on max settings basically only cost me £650 like over 2 years ago.

I play significantly more games on my PC than PS3.

Cool story bro? Don't know why you keep posting shit that's directly related to you, can you even make a sentence without an "I" statement?

No one forced you to buy a new TV .. you can hook xbox or PS3 up to any TV .. even those pocket ones that cost 45 dollars .. lets see you buy a monitor for that price. It's all preference so TV isn't really even part of the arguement.

You know you can connect a PC to more outputs than the default Xbox/PS3? Hell, the first versions of the Xbox didn't even have HDMI support...

Your argument is invalid.

Also, I don't have a TV. I got 2 monitors and 2 PC's (and not importantly, a laptop) and 1 TV card. Allows me to watch TV, but then again, what is on TV that's not on PC... Most TV shows are utter BS anyway.

And to explain why you'd need to take the TV into account; If you don't you would also need to scrap chassis, monitor, speakers, keyboard and mouse off the PC list, which means that you can upgrade every 7 to 10 years or so (compared to console graphics) for say 500 Euros. Probably less, but hey...

A console at launch also costs 500 Euros, so they are the same price in store. Only big difference is that I can do pretty much anything with my PC, unlike you with your console can only do what MS and Sony intended you to do with it. Hell, with a PS3 you get an awesome extra-free rootkit and feature removal with it, now only for extra free and if you don't want to install the "update" you can't play games anymore! AWESOME! Sure sounds like a must buy to me.

So basically you'd spend 500 Euros on your console and then another 200+ Euros on your computer. Wait, that makes the console effectively more expensive and you have a slower PC when you're actually doing work on it.
