If it does, I wonder if it would be possible to just grab the scripts and drop 'm in your ren folder and play ren with 4.0.

It does use scripts 4.0, but using that build of scripts 4.0 with anything besides APB Gamma is unsupported.

Means as much as, we don't know if it does not work properly works with Renegade because no proper tests it's locked to APB and because of iffy AC.

Iffy AC as it currently requires very specific versions of the original Renegade files. That is, when playing on a 4.0 server.

If I wouldn't be @ internship (or had working RDP access here )I would download Gamma and put an "unofficial" TT release together, because this is absolute rubbish.

Edit: Update because of new info.
