I was digging around in my hotmail account and came across this email from westwood back in 2004.

It still works and i'm giving it out to whoever sends me a PM for this first.

Thank you for applying for a Command & Conquer Renegade Dedicated Server Key.

--- PLEASE READ BEFORE LAUNCHING YOUR SERVER! ---

Hosting a Dedicated Renegade Server takes a good deal of CPU power and bandwidth. Running the server software on any machine not up to the minimum specifications, or without the appropriate bandwidth will result in very poor performance for your players.

Please ensure that your system meets the following requirements before hosting your own server.

Component Minimum Spec Comment

CPU: P3/800MHZ For 32 players. Fewer players may be able to operate on a slower machine.

OS: NT/2000/XP We do not suggest using 98/ME due to OS stability issues.

RAM: 128MB 128MB minimum for 1 server instance.

Bandwidth: 128Kbs 4 players (cable modem/ADSL)

512Kbs 16 players (if you have a symmetrical connection - check with your ISP)

1 Mbs 24 players

1.5Mbs 32 players

--- FOR MORE INFORMATION ---

The README document that comes with the dedicated server software you downloaded is required reading for anyone that wants to have the "premier" Renegade experience for their players. It contains information on how to change game options, set up dual servers on one machine, and a variety of other important information and tweaks you'll want to know.

While this software is officially unsupported, Westwood Studios hosts a message board system and website for its players and server administrators which may also be of help to you. To participate and meet other server admins like yourself, please visit our website at:
