Hello.

I've been playing on cloud since almost 10 months ago, and last week i've had tried to download 3.4.4 scripts.

okay, it installed correctly. but when i enter the game, it crashes after some seconds i enter any server.

BigCello helped me, telling me to re-install renegade, the 1037 patch and the 3.4.4 scripts, but still didn't work.

anyone can help?

Thanks.
