Hey people,

We have today launched our new Renegade-X EU Based Gameserver (Germany) and we would like to invite everyone to come join us tonight at 20:00 (8PM) Dutch Time on the server. (7PM UK Time)

Server Info:

Server IP: 109.230.246.231

Server Port: 31337

Server Name: RenegadeXServer.com Slaughterhouse #2 Ranked (EU)

Specifications: Intel i7 8x2.93GHz, 8GB Ram, 1GBit

Website: <http://www.RenegadeXServer.com>

Forums: <http://forums.mp-gaming.com/forum-537.html>

For newcomers:

Renegade-X is a (currently) modification/add-on for Unreal Tournament 3 and can be played for free (if you own UT3 that is). It sets the Renegade Command and Conquer Universe on the UT3 Engine where you can play with a large range of Infantry and Vehicles in warfare where you must destroy the enemy base.

Download Renegade-X:

You can download Renegade-X over here:

<http://renegadex.game-maps.net/index.php?act=view&id=6>

Installation:

Install it into the default suggested location.

IE: My Documents\My Games\Unreal Tournament 3\Renegade

Running Renegade-X and Updating:

Then launch Renegade-X.exe, it will prompt you that you need to update to the latest version. Simply click "OK" and "YES" and do not interrupt the update process and you should be ready to go as soon as it's done.

Problems?:

In some rare cases it is possible that the Updater (and/or Renegade-X.exe itself) does not function properly or crashes. In that case you can download a newer version of the executable over here: <http://www.renegade-x.com/sc/updates/Renegade-X.exe>

Overwrite the existing file and launch it, the problem maybe resolved now.

If you are still experiencing problems you can post on the Renegade-X forums over here: <http://www.renegade-x.com/forums/forumdisplay.php?34-Technical-Support>

Affirmative!

Alright guys/girls we hope to see you on our server tonight

Please do spread the word about this event and all be there

Greetz zunnie
