Thought I would share a goodie with everyone (1920x1200 Desktop Wallpaper).

Toggle Spoiler

I didn't think I would get such positive feedback on the project from everyone, but because of the motivation I was able to architect a database independent framework for the program, so MySQL support will be included in the first release of the software.

For those who asked if there would be a free version, there is a possible "Lite" version being speculated, but for those who wouldn't be able to afford a one-time license purchase there will be a hosted solution available for a monthly fee which will be as affordable shared web hosting. Exact prices are not available yet, but the project is definitely under a lot of development.

If anyone has any other feedback, or again would like to get involved in testing a pre-release version, the window of time is still open for it.
