Morning all.

Nice work with the release of the public beta. However i am noticing a lot more ghosts recently and the client does seem to be a bit slower, could be my internet, it isn't the best as it is. However the problem i am having is that after playing for awhile the client crashes completly. I minimize to find a message saying that the game client is unable to continue to run in its normal state (SOMething like that, there was no error code or anything). Anyway i have uploaded the crash dump document within this post. Hope this comes in useful.

WNxKenny
