Pentium 4 Processors use a quad-pumped FSB.
AthlonXP Processors use a double-pumped FSB.

What's this mean?

P4 Processor @ 200mhz FSB = 800mhz FSB
AXP @ 166mhz FSB = 333 FSB

In other words, 200mhz FSB is right for your processor. If you were to raise it to 250, you would
have a 1ghz FSB
