This is hopefully fixed in the next release. My guess is that it reads your serial/install path wrong. Now that I mention that, wasn't there a bug with the TFD installer that did not set the install path correctly, and required you to change your serial? Hm. Can you please contact me on IRC or IM, spotelmo, to check that? ([#tt](http://irc.blackintel.org/irc.n00bstories.com) or see my forum profile)
