As I said... This is due to the SERVER. Your maps are default which is what TT checks for.. Because st0rm or <add server here) use a slightly modded version of said map it downloads it again. Its the only way to stop people cheating,

This isnt your fault its the servers because they haven't allowed your specific type of map/skin/model.

TT/4.0 isnt forced (yet) however you (yourself) are forced to use it because people have complained of cheats and by you running 4.0 it proves you dont.

So either;

- 1) play with 4.0 and join a server doesn't kick you for invalid (add map/skin/model) here)
 - 2) join a older server and have people ban you/kick you etc for cheats and whatnot.
-
