I need help!

I made a Fan, it spins, consits of 4 frames.
I exported it and it works fine in w3d viewer
in w3d the name of the animation is FAN.FAN
I opened leveledit, and then i added the animation name and made it "loop"

I export and nothing happens!?!?!

The Fan has projectile/pyhsical/ and camera enabled.
Does it need Bones? wwskin?? what!?!?!
