What game is that? Is that Renegade? I don't know, I see Spongebob, is that a Spongebob cartoon? Ooh that truck, I've seen that it another game...

I'm being sarcastic. You have WAY to many skins. You probably have a weak ass computer too. Last time I tried adding skins, maybe between 5-7 skins, my PC and GFX card could not handle it. As a matter of fact, other objects in the game began to dissapear, like...tank shells. There's nothing like seeing an MLRS shoot at you with invisible ammo. However, that was on a much older machine. New machines I should think handle that well, which leads me to believe the problem lies with your hardware.

Delete all those skins then see what your FPS is.

Man, whatever happened to good 'ole fashioned plain Renegade.
