StealthEye wrote on Sat, 19 November 2011 20:15: Can someone who uses Norton please test whether the false positive is indeed gone with the updated definitions? Though that is, when the next update is available, because the releases seem to date before the 16th. (For the record, I got the same e-mail back from them the 18th.)

I had to repeat download scripts 4.0 each time I played as Nortons removed it each time, but as of now, no problem.
