Homey wrote on Fri, 02 December 2011 18:31 Yes. But you can only use 3 of the 4 ports. Also the third monitor must be on the display port. You can never use HDMI and both DVI's at the same time.

I've also never heard of a video card that blows air down or a psu that blows air into the case. Both parts suck air in and blow it out the back. Some video cards blow air on to themselves and don't really have a vent function, all of the non-EE versions of a GTX 460 are like this. The EE (External exhaust) versions blow out air out the back.

LEt me fix my mistake, it was my older card that blow air down =/, but ya i dont mind having three screens, and I ordered the adapter for the display port this morning, and I am using my new tv as my third (middle monitor) which I play bf3 on the highest settings and highest res. it runs awesome!
