Alright thanks! I didn't put an extra "NoGameplayPending", I just edit the settings (true, false, 1, 0, off, ect.). Took out the 2nd one listed, server started up normally!

THANKS

Also, was the moderators add/removing/authing fixed? I posted about the problem before and I was directed to jonwill, and told maybe the new update would have the fix(beta 3).

Again..also... I have to start up my server every 12-24hrs because it crashed, sometimes the BRenbot does also or BRenbot restarts automatically but in IRC the bot name is changed to BOTNAME_1 instead of the original name i chose for the bot BOTNAME

Thanks again
