When I log on to Resurrection, I usually see the Jelly Marathon server but recently I have not been able to find it or log onto it. I noticed that at the bottom of resurrection it has unscanned servers so I try refreshing over and over but it still does not display them. I have tried adding back jelly marathon but it will not add it back with the IP for some reason. I just need to know how to fix the problem so I can begin logging back in to play jelly marathon server again. Help please.
