Subject: FPS "smoothness" issue
Posted by Ani on Mon, 27 Feb 2012 00:51:50 GMT

This happens to me on a couple of games, but CoD4 and Renegade seem to have this issue happening to me the most.

I have a gaming laptop, G74SX-BBK8 from ASUS, and per the specs, it's more then good enough to handle modern games, let alone Renegade.

I have it all the drivers installed, nothing hogging up resources in the background, etc. Renegade is all up to date, installed properly (I think?) and it works fine, except for one small issue.

About once a minute or so, my game freezes for what seems like 20ms, randomly.

I need help as I don't know what to do at this point, I even went as far as disabling powermizer on the GPU

Thanks in advance
